(54) OPTICAL SIGNAL PROCESSOR AND OPTICAL SIGNAL PROCESSING METHOD

(57)Abstract:

PROBLEM TO BE SOLVED: To provide an optical signal processor and an optical signal processing method by which the generation of light pulses of 1-10 ps, waveform shaping, waveform measuring, waveform recoding and correlative processing or the like are allowed.

SOLUTION: The device is basically composed of an optical waveguide, a first means which equally distributes output light from the optical waveguide and an assembly of the optical waveguide the optical path length of which changes at a fixed interval, and the device is provided with a waveguide array which spectrally diffracted output light, a second means which image-forms light output from the waveguide array and a mirror which receives an incidence of light image formed by the second means and reflects incident light.

LEGAL STATUS

[Date of request for examination]

05.02.2002

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the
examiner's decision of rejection or application
converted registration]

[Date of final disposal for application]

[Patent number]

3520072

[Date of registration]

06.02.2004

[Number of appeal against examiner's decision of
rejection]
